FOREWORD

The Constitution of Kenya (2010) established the Equalisation Fund which is allocated one half percent of nationally raised revenue, computed on the basis of the most recent audited approved accounts of revenue. The Equalisation Fund (EF) became operational in the financial year 2011/12 following the promulgation of the Constitution in 2010. The Fund is used to improve basic services that relate to water, health, roads and electricity- among others, in marginalised areas.

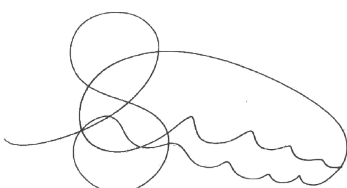

The Constitution further entrusts the identification of marginalised areas and determination of a criteria for sharing revenues from the Equalisation Fund to the Commission on Revenue Allocation (CRA). The Commission prepared the first three-year policy in 2013, which identified fourteen marginalised counties and allocated Kshs 11.8 billion from the EF to these counties. The first policy lapsed in the FY 2016/17. This is the second policy prepared by the Commission, in pursuit of this mandate.

Invoking the principle of equity, this second policy recognizes that there are pockets of extreme marginalisation even in prosperous places. Therefore, this policy adopted a new approach to identify marginalised areas. In this policy, the Commission has moved beyond identifying marginalised counties and instead, determined specific areas using sub-locations where marginalised communities live. This approach is expected to ensure that resources meant to improve services in lagging areas are properly targeted for the realization of maximum impact.

In this regard, guided by the provisions of Article 204, this second policy used indicators on access to education, water, sanitation and electricity to construct an index of deprivation. This index is used to rank 7,131 sub-locations from the lagging areas to the most prosperous. A total of 1,424 sub-locations, the bottom 20 percent where about 5 million Kenyans live, have been identified for funding from the Equalisation Fund. The policy also identifies four marginalised minority communities that need to be targeted for service provision, namely; Elmolo, Makonde, Watta and Dorobo-Saleita. The policy has formulated an index for sharing the funds among the 1424 sub locations.

This policy recommends the fostering of partnerships through matching funds, where appropriate, along with the involvement of county governments, local administration and beneficiary communities in the selection and implementation of projects, among other recommendations.

It is the hope of the Commission that the implementation of this second policy will improve access to basic services for the bottom 20 percent and that no Kenyan will be left behind.

Dr. Jane Kiringai
Chairperson

ACKNOWLEDGEMENTS

The preparation of this policy benefited from a wide range of organisations and individuals. In particular, we acknowledge the invaluable contribution from Parliament, various Ministries, County Governments, Civil Society Organizations, Members of the Public, Academia and Development Partners.

More specifically, we recognize and appreciate the role played by the Kenya National Bureau of Statistics (KNBS) in providing data. We are also grateful to the World Bank and the United Nations Development Programme (UNDP) for their technical and financial support.

To all those we engaged during the various stakeholder consultation forums and field visits and whose inputs helped shape the content of this policy, we record our appreciation. Our special mention goes to County Commissioners and various officers within their jurisdictions who organized the consultation forums with marginalised communities.

We are equally indebted to all the independent reviewers and editors whose insightful critiques, ideas and encouragement helped improve and shape the policy proposals that have been articulated herein.

George Ooko
Commission Secretary/CEO

EXECUTIVE SUMMARY

1. Background

The Constitution mandates the Commission to determine, publish and regularly review a policy in which it sets out the criteria by which to identify the marginalised areas for purposes of the Equalisation Fund. The first such policy was published in 2013 and applied subsequently.

2. Factors that have Contributed to Marginalisation

Two key factors contributed to marginalisation: colonial policies and practices, and inadequate post colonial corrective redistributive policies. These factors limited access to services by some communities/areas. In effect, marginalisation in Kenya is largely a matter of exclusion from participation in integrated social and economic development.

3. The Basic Principles

This policy is anchored on five key principles; namely: subsidiarity, equity and inclusivity, distributive justice, transparency in resource distribution and use, and public participation in the application and management of public finance.

4. The First Marginalisation Policy

The first marginalisation policy used county as the unit of focus. The Policy used information on historical injustices, a survey of the 47 counties and an index of county development calculated from information on poverty levels, status of roads, access to and use of electricity, clean water, improved sanitation and health, and levels of literacy. The policy also included revenue sharing criteria. The Equalisation Fund Advisory Board gave guidance to beneficiary counties on identification of projects. Key considerations in project identification included the completion of stalled or on-going projects, those beneficial to more than one constituency, projects included in the County Integrated Development Plans (CIDPs) and those with potential for creating jobs and promoting economic growth.

However, using the county as a unit of focus masked significant intra-county differences that compromised opportunities for preference matching and impact optimization. In addition, field visits revealed that projects proposed under the first policy failed to benefit from broad public participation, spanned too many sectors, were not well targeted and suffered from slow disbursement of funds. Because functions identified in the Constitution for benefitting from the Equalisation Fund are concurrent, the management arrangement should have made provisions for better project- implementation coordination between the national and county governments. These shortcomings of the first policy and the experiences drawn from other countries informed the design of the second policy.

5. Second Policy Focus

In this second policy, focus has shifted from the identification of marginalised counties to identification of marginalised areas, guided by the smallest administrative unit¹ for which data is available. This meant that deprived areas in otherwise well-developed counties had a chance of being identified as marginalised. Similarly, developed areas in otherwise poor counties would be excluded from consideration.

To identify marginalised areas, an index of deprivation was constructed by using information on access to safe water, school attendance, access to improved sanitation and electricity, using the principal component analysis. The deprivation index was used to rank 7,131 areas from the most deprived to the least deprived.

The Commission recognised that even within marginalised areas, there are some minorities that need special consideration. Using a combination of selected anthropological approaches, the Endorois, Ilchamus, Sengwer, Waata, Elmolo, Aweer-Boni, Makonde, Yaaku and Ndorobo-Saleta were identified as minority groups resident in Kenya. Of these minority groups, the Elmolo, Makonde, Waata and Dorobo-Salieta were found to be the most deserving of special consideration in improvement of services to the levels enjoyed elsewhere in the country.

Taking the modest size of the Fund into consideration and noting the existence of other mechanisms for improving service delivery across the country, interventions under the Equalisation Fund should target bottom 20 per cent of the deprivation ranking. This second policy therefore identifies 1,424 areas as marginalised.

Policy recommendations

The Policy recommends for the strengthening and rationalisation of implementation mechanisms by: setting up project implementation units at the divisional level with Assistant County Commissioner as the Chair, financing of only three priority areas, preparing operational guidelines, strengthening public participation, deliberately targeting minorities within marginalised areas, and ensuring timely disbursement and utilisation of funds.

CHAPTER ONE

INTRODUCTION

1.1. Purpose of the Policy

1. The purpose of this policy is to identify marginalised areas and determine the criteria for sharing revenue from the Equalisation Fund among the marginalised areas. The Equalisation Fund is a national government Fund which is allocated one half percent of all audited approved revenues collected by the national government. The Fund is to be used to improve services in marginalised areas to the extent necessary to bring the quality of services to levels generally enjoyed by the rest of the nation.

1.2. Scope of the Policy

2. This policy focuses on two complementary perspectives of marginalisation: societal and spatial. The societal perspective focuses mainly on human dimensions, particularly in connection with access to and utilization of public resources. Societal marginalisation emphasizes the underlying causes of inequality and social exclusion. The spatial perspective seeks to address the physical location and spatial distance or economic-geographical segregation from the centers of development that affect integration of segments of the population into the mainstream society.
3. This policy is therefore limited to addressing extreme forms of marginalisation arising from barriers in relation to access to public services such as water, education, road, electricity and health facilities. These barriers are not instantaneous, rather, they have a risen over time sometimes bearing a historical trajectory.

1.3. Policy Targets

4. This policy is prepared for implementing the Equalisation Fund. It therefore targets the Equalisation Fund Advisory Board (EFAB); the Executive which implements related complimentary services; the national Parliament whose responsibility is to appropriate revenue from the Fund, counties with marginalised areas and communities that live in the marginalised areas.

1.4. Legal Framework for the Policy

5. Article 216(4) mandates the Commission to determine, publish and regularly review a policy in which it sets out the criteria by which to identify the marginalised areas for purposes of the Equalisation Fund.
6. Article 204(1) establishes the Equalisation Fund into which one half per cent of audited approved revenue is paid.
7. Article 204 (2) provides that the national government shall use the Equalisation Fund to provide basic services including water, roads, health facilities and electricity to marginalised areas to bring the quality of services in these areas to the level generally enjoyed by the rest of the nation, as far as possible.
8. Article 204(3) provides that the national government may use the Equalisation Fund either directly or indirectly through conditional grants to counties in which marginalised communities exist.

9. Article 260 defines a marginalised community, as (a) a community that, because of its relatively small population or for any other reason, has been unable to fully participate in the integrated social and economic life of Kenya as a whole; (b) a traditional community that, out of a need or desire to preserve its unique culture and identity, has remained outside the integrated social and economic life of Kenya as a society; (c) an indigenous community that has retained and maintained a traditional lifestyle and livelihood based on a hunter or gatherer economy; or (d) pastoral persons and communities, whether they are nomadic; or a settled community that, because of its relative geographic isolation, has experienced only marginal participation in the integrated social and economic life of the Kenyan society.
10. Article 56(e) provides that the State shall put in place affirmative action programmes designed to ensure that minorities and marginalised groups have reasonable access to water, health services and infrastructure.
11. This policy presumes that marginalised communities, marginalised groups and minorities live in areas that can be geographically defined such that any form of affirmative action earmarked for these areas will improve service provision among them. The underlying reasoning is buttressed by the interchangeable use in which the Constitution applies the terms; marginalised communities and marginalised areas as captured in Article 204(3)(b) and Article 216(4), respectively.

1.5. Guiding Principles of the Policy

Subsidiarity

12. Subsidiarity is a devolutionary principle, compelling the allocation of social functions and the accompanying resources from higher to the lower levels of government. It is an organizing principle, predicated on the norm that matters of public interest ought to be handled by the smallest, lowest or least centralized competent authority. County governments are best placed to identify development gaps and needs in basic services and to design requisite programmes and projects that are appropriately targeted. In this policy, the principle of subsidiarity has been used to guide the recommendations on framework on implementation of the policy.

Equity

13. Equity demands fairness and impartiality in the sharing and distribution of public resources. Kenyans need to be guaranteed sustainable livelihoods, regardless of who they are in terms of their sub-national identities, their social status and where they live. The Commission has determined an equitable criterion for sharing of revenue from the Equalisation Fund based on a deprivation index constructed using indicators on water, education, sanitation and electricity. The criterion is used to rank all sub-locations in the country from the most deprived to the least deprived.

Efficiency

14. This principle provides for the prudent use of public resources. Efficiency is achieved when projects are identified, prioritised, implemented and operationalised at the least cost possible and in a timely manner. This is achieved by the lowest level of government. At the lowest level, needs are matched with the projects priorities for financing. This principle is used in guiding the Commission's recommendations on project identification and the framework for the implementation of this policy.

Transparency

15. Transparency demands openness in respect to: sources and quantum of allocation, accurate identification of marginalised areas, correct prioritization of projects, dispassionate monitoring and proper accounting of use of public resources. The Commission utilised openly available data and information from the Kenya National Bureau of Statistics (KNBS) to construct an index of deprivation and a criterion for sharing of revenues from the Equalisation Fund.

Public Participation

16. Public participation underpins democracy and good governance. The views and opinions of the affected sections of society and other relevant stakeholders ought to be considered in the formulation, prioritization and implementation of policies. In identifying marginalised areas and determining the criteria for sharing revenue from the Equalisation Fund, the Commission engaged national and county level stakeholders. Further, the Commission engaged marginalised communities in an attempt to understand what really marginalises them, and what they consider to be their key priorities.

1.6. Policy Development Process

Review of the first policy

17. The process of developing this policy started with a review of the first policy. The review assessed implementation and the emerging institutional and operational challenges of the first policy. The exercise involved review of literature on identification of marginalised areas, unit of analysis, construction of deprivation indices and their application to the distinctiveness of the Kenyan situation.

Stakeholder Engagements

18. The Commission engaged stakeholders on different but complementary platforms in the course of preparing this policy. The engagements focused on: consolidating the existing knowledge on marginalisation, identifying priority areas for intervention; building a common understanding of the constitutional obligations on addressing marginalisation; emerging challenges following implementation of the first policy, and what needs to be done differently to improve services in marginalised areas.

Data and Data Analysis

19. The Kenya integrated Household Budget Survey data (KIHBS 2015/16) provides data at the county levels. This data masks pockets of marginalised communities in averagely well to do counties. The Housing and Population Census data for 2009 is the latest comprehensive data available that can be used to identify marginalised areas at levels below the county. The 2009 data was used to construct an index of deprivation and determine the criteria for sharing of revenue from the Equalisation Fund. The data analysis is based on the Principal Component Analysis methodologies.

Expert Review

20. The policy benefited from inputs by different experts engaged during the various stages of the preparation of the policy.

CHAPTER TWO

BACKGROUND OF MARGINALISATION IN KENYA

2.1. The Colonial Era

21. Marginalisation in Kenya is a historical phenomenon that dates back to the colonial era. The colonialists established a centralized system of governance in Kenya. Power was vested in the Governor who represented the imperial government. This governance structure served the minority interests of the settlers. The colonialists pursued discriminatory legislations, inadequate and inappropriate policies that benefitted settlers but were punitive to Africans. The policies lacked deliberate counter policies to redistribute growth. Implementation of the colonial legislation and /or policies intentionally or inadvertently instigated marginalisation in some parts of the country. This section presents, in a chronological order, some of the key legislation, socio-economic and political events that led to marginalisation in Kenya from the precolonial period to the present.

i. Land laws and Ordinances (1894-1926)

22. Kenyan communities occupied certain portions of land where they lived either as pastoralists, hunters and gatherers, while some communities practised cultivation and fishing. Through the Land Acquisition Act of 1894, the first Crown Land Ordinance of 1902, Crown Lands Ordinance of 1915, and the Kenya Native Areas Ordinance of 1926, native African communities were evicted to give way to settler farmers and to facilitate the construction of the Kenya-Uganda Railway. All ‘waste and unoccupied’ land in the protectorate was declared ‘Crown Land’ which was demarcated into either scheduled areas for European settlement or non scheduled areas for African reserves. Often, the indigenous owners of the confiscated lands were relegated to just being labourers of the British farmers.

ii. The Kenya Uganda Railway (1896-1901)

23. The construction of the Kenya-Uganda railway was an extractive adventure for settlers that led to creation of a corridor that ran through the high agricultural potential areas. The British developed infrastructural facilities along the railway line. These facilities included: roads, schools, hospitals, and water points meant to serve both the settlers and the native labourers. To make the railway sustainable in terms of revenue, the British government encouraged the white settlers to carry out large scale farming of coffee and tea. The white settlement shaped the development of Kenya for many years. As a result, small stations like Nakuru, Naivasha, Tigoni, Kijabe, Sigona, Kericho, Eldoret and Kisumu were developed to serve the settlers’ economic interests. Many of today’s interior towns and ports developed along the railway line junctions and depots during and after the construction of the railway. Inadvertently, areas far away from the railway line remained undeveloped.

iii. Closed Districts Policy of 1902

24. The District Ordinance Act of 1902 created the ‘Closed Districts’ Policy. This policy divided the country into two by cutting off the Northern Frontier Districts (NFD) which consisted of the current counties of Mandera, Wajir, Marsabit, Garissa, and Isiolo from the rest of the country. The British colonial administration of the NFD created a psychological distance between the people of the NFD and the rest of the Kenyans through the Outlying District Ordinance of 1902, the “Closed District” Ordinance of 1926 and the Special District Administration Ordinance (SDO) of 1934. The law required special passes for those moving in and out of these closed districts. The British administration intentionally neglected the NFD both economically and politically such that by the time they left, it was certainly the most backward and isolated part of Kenya.

2.2. The Post-colonial Era

i. Establishment of majimbo governments, 1963

25. Upon gaining independence in 1963, Kenya adopted a fairly progressive, liberal Constitution which was intended to deconstruct the colonial rule that had created an asymmetry in the economy. ‘Majimboism’ was one of the defining features of the Constitution and was intended to ensure enhanced service delivery throughout the country. The eight regions (popularly known as Majimbo) created, were Coast, Nairobi, Eastern, Central, Rift Valley, Nyanza, Western and North Eastern. However, the existence of Majimbo was short-lived as it was revoked through the Constitution of Kenya (Amendment) Act No. 38 of 1964. The amendment revoked the provision on regions levying regional revenue and providing basic services, hence making the regions fully dependent on grants from the Central Government. This weakened the majimbo system and eventually it got abolished in 1964 and was replaced with provincial and district administrations which were centrally administered.

ii. Sessional Paper Number 10 of 1965

26. In the post-independence era, the country’s development strategy was anchored on Sessional Paper No. 10 of 1965 on African Socialism and its Application to Planning in Kenya. According to the Sessional Paper, the State had an obligation to: ensure equal opportunity to all its citizens; eliminate exploitation and discrimination, and; provide social services such as education, health care and social security. However, the policy framework emphasized investment in high potential areas hoping that the rest of the country could benefit from the trickle-down effect. Inadvertently, the Strategy did not provide an appropriate framework to redistribute resources to the disadvantaged areas.

iii. The Centralization of Service Delivery

27. Sessional Paper No.12 of 1967 provided a framework to strengthen local governments to redistribute resources to all regions and build infrastructure. However, the national government reversed course with the Transfer of Functions Act in 1969. The Act transferred provision of health, education, and municipal roads to central government along with their main sources of local revenue. The transfer of functions to national government re-centralised planning leaving the local governments considerably weaker and inadvertently marginalising the NFD further.

iv. The Harambee Philosophy

28. In the late 1960s mobilization of resources at the local level was undertaken by communities giving rise to the harambee philosophy which inadvertently compounded inequality. Funds pooled through harambees were used to build schools, health facilities and other community projects previously provided by local authorities. Though a noble idea, the Harambee philosophy meant that communities that lacked capacity to raise their own funds lagged behind hence perpetuating inequality in development projects among regions.

v. Special Rural Development Programme

29. The Special Rural Development Programme (SRDP) was initiated in 1971 as an experimental pilot programme testing strategies for accelerating rural development including growth in local resources utilization and coordination in planning and development management. It was as a result of recognition of the weaknesses in centralized planning. The SRDP targeted 15 arid and semi-arid districts but was piloted in only 6 areas, namely; Migori, Vihiga, Kapenguria, Tetu, Mbeere and Kwale. The aim of the programme was to achieve balanced development among regions through accelerated expansion in the agricultural sector. The programme heavily relied on donor support and was abandoned after piloting.

vi. The Constitution of Kenya 2010

30. The first major and deliberate effort to address marginalisation was articulated in the Constitution. The Constitution provides for a devolved governance structure that operationalised a national government along side forty-seven county governments with clear functional assignments and a framework for equitable revenue sharing. It explicitly provides for a framework to improve public services in marginalised communities and minorities. Thus, the Constitution provides for a broader framework with which to address within and between county developmental challenges.

31. Emanating from the provisions of the Constitution, the following assumptions underlie the current efforts aimed at addressing marginalisation:

- i. Marginalisation emanates from a lack of basic public services in a society;
- ii. The equitable provision of, and unhindered access to services are meant to enable groups and communities enjoy the basic standards of life;
- iii. Affirmative action embedded in a broader social-reconstructive policy framework for an inclusive political economy is the central plank for equitable social development.

32. The Constitution has thus given new impetus to the government's commitment to the task of de-marginalising communities. This policy forms one such effort by the national government to improve services in areas that are marginalised to the levels enjoyed by other Kenyans.

CHAPTER THREE

REVIEW OF THE FIRST POLICY

3.1. Introduction

33. The first policy identifying marginalised areas was published by the Commission in 2013. Using the county as the unit for analysis, the policy identified 14 counties as marginalised. These were: Turkana, Mandera, Wajir, Marsabit, Samburu, West Pokot, Tana River, Narok, Kwale, Garissa, Kilifi, Taita Taveta, Isiolo and Lamu. The policy also provided the criteria for sharing of revenues among the 14 counties for financial years; 2014/15; 2015/16; 2016/17.

3.2. Allocation to the Equalisation Fund

34. The Equalisation Fund became effective in financial year 2011/12 for the initial period of twenty years. Allocations to the Equalisation Fund are based on one half percent of all the revenue collected by the national government each year calculated on the basis of the most recent audited accounts of revenue received as approved by the National Assembly. The Equalisation Fund is a national government fund for improving selected basic services in marginalised areas. Table 1 summarises the provision to the Fund since inception.

Table 1: Cumulative Fund Resources (Kshs. Billions)

S/no.	Financial Year	Base year	Audited/Approved Accounts	Equalisation Fund Entitlement
	2011/12	2010/2011	468	2.34
	2012/13	2011/2012	529	2.65
	2013/14	2011/2012	529	2.65
	2014/15	2012/2013	777	3.88
	2015/16	2012/2013	777	3.88
	2016/17	2013/2014	936	4.68
	2017/18	2013/2014	936	4.68
	2018/19	2013/2014	936	4.68
Total Amount				29.44

Source: CRA, 2018

3.3. Criteria for Identifying Marginalised Counties

35. In formulating the first policy, three approaches were used to identify marginalised counties. These were: information generated on historical injustices; a survey carried out in all the 47 counties on marginalised counties and, a county development index (CDI) constructed on the basis of information on poverty levels, status of roads, use of electricity, access to safe water, access to health care services, access to improved sanitation, and levels of literacy. Information from the three methodologies was triangulated to identify the 14 marginalised counties.

3.4. Criteria for Sharing of Revenue

36. The first policy shared 50 per cent on the money equally among the 14 marginalised counties and the other 50 per cent based on the inverse of the County Development Index (CDI). Table 2 summarises the criteria used for sharing revenues from the Equalisation Fund, and the cumulative three-year allocation to each county in accordance with the provision of the first policy.

Table 2: Criteria for Sharing Revenues

County	Criteria for Sharing Revenue	Total Allocation
1. Garissa	6.64	783,520,000
2. Isiolo	6.33	746,940,000
3. Kilifi	6.47	763,500,000
4. Kwale	6.74	795,300,000
5. Lamu	6.12	722,200,000
6. Mandera	8.2	967,600,000
7. Marsabit	7.51	886,200,000
8. Narok	6.86	809,500,000
9. Samburu	7.37	869,700,000
10. Tana River	7.28	859,000,000
11. Turkana	8.9	1,050,200,000
12. Taita Taveta	6.37	751,700,000
13. Wajir	7.88	929,800,000
14. West Pokot	7.34	866,100,000
Total	100	11,801,260,000

Source: CRA 2017

3.5. Management of the Equalisation Fund

37. The Equalisation Fund is managed by the Equalisation Fund Advisory Board (EFAB) established by Gazette Notice Number 1711 of 2015. The Board draws its membership from the ministries of Finance, Health, Water, Energy, Infrastructure, Education, Devolution and Planning as well as National Coordination while the other four members are appointed by the Cabinet Secretary for Finance from outside the public service.

3.6. Project Identification

38. Project identification was undertaken in December 2016 under the guidance of the EFAB with the following criteria used to identify eligible projects: completion of stalled/ongoing projects; projects whose benefits accrue in more than one constituency; projects contained in the County Integrated Development Plan; projects that were fiscally viable; projects that were meant to address extreme poverty, and projects that promote growth and job creation within the county.

3.7. Implementation of the First Policy

39. The Commission recommended in the First policy that the funds be transferred to county governments as conditional grants. However, EFAB Implemented the Fund directly through line ministries.

40. The implementation of the first policy began in the financial year 2016/17. The EFAB appropriated Kshs. 12.4 billion across different sectoral priorities that included roads, health, education, water, and electricity as well as fund administration. This was a lump sum allocation for three financial years; 2014/15; 2015/16 and 2016/17 as shown in the Table 3.

Table 3: Allocations from the Equalisation Fund

No.	County	FY2016/17 (Kshs.)	Allocation to Sectors	Kshs.
	Turkana	1,050,200,000	Water	605,133,332
			Roads	320,066,668
			Health facilities	125,00,0000
	Mandera	967,600,000	Water	470,000,000
			Roads	300,000,000
			Health	170,600,000
			Electricity	27,000,000
	Wajir	929,800,000	Water	580,800,000
			Health facilities	349,000,000
	Samburu	869,700,000	Water	746,000,000
			Roads	123,700,000
	West Pokot	866,100,000	Water	284,525,000
			Roads	419,575,000

Total for projects				11,801,260,000
Allocation to EFAB (4.82 per cent)				598,820,000
Total				12,400,080,000

Source: EFAB, 2017

41. The funds have been used to finance projects in five sectors namely; roads, education, water, health and electricity. Though Article 204(2) explicitly lists priorities in water, roads, health and electricity; priorities in education were considered for financing in the first policy. This is because Article 204(3) provides a window for the inclusion of other priorities. Out of a total of Kshs.12.4 billion allocated during the first policy, only Kshs. 1.1 billion had been spent by June 2017. A total of Kshs. 11.3 billion remained unutilised in the Fund. In accordance with the provisions of Article 204(5), any unexpended money in the Fund at the end of a financial year remains in the Fund. Therefore, the unexpended amount of Kshs. 11.3 billion will be spent on projects identified among the 14 counties.

3.8. Emerging Issues and Challenges under the First Policy

42. Implementation of projects across the 14 counties under the first policy has been slow. This notwithstanding, review work on the first policy has brought to the fore a number of challenges that need to be addressed by the second policy in order to ensure that the objective of improving services in marginalised areas is realized. The key challenges and emerging issues include the following:

i. Interpretation of Article 204

43. Provisions of Article 204(2) explicitly spell out four sectors and services where the Fund should be used. These are: water, electricity, health facilities and roads. However, the consideration of the word 'including' in the Article provides a window for inclusion of other basic services besides the four. On the same note, the provisions of Article 204(2) do not necessarily imply that at all times, marginalised areas must select projects in all the four sectors. Each project/programme is to be considered on its own merit depending on the needs of marginalised communities.

ii. Unit of Analysis

44. The first policy considered a county as a unit of analysis. This resulted in exclusion of pockets of marginalised areas and communities found within relatively developed counties. Besides, the county is too broad to successfully target improvement of services among marginalised communities. In line with the principles of subsidiarity, transparency and efficiency, identification of marginalised areas needs to be considered at the lowest level with credible data. The smaller the area considered, the easier it is to target the Fund for maximum impact in improving services among the marginalised communities.

iii. Sharing of Funds

45. The revenues from the Fund for three financial years appropriated under the first policy were shared equitably using the criteria determined by the Commission among the 14 marginalised counties. However, at the county level, the funds were shared equally among constituencies within marginalised counties. This was done despite the fact that levels of service provision are not homogeneous among constituencies and communities within the marginalised counties to warrant equal sharing. Therefore, the equal sharing of revenue among constituencies in marginalised areas greatly undermined the equity principle inherent in the objective of establishing the Fund.

iv. Inadequate Public Participation in Identification of Projects

46. Identification of projects in the first policy was done at a one-off meeting at county level where representatives from constituencies were invited to participate. A county is too broad to achieve effective public participation meant to capture the interest of a marginalised community. Project selection and prioritisation did not

follow the bottom-up approach, thereby failing to give marginalised communities a chance to engage and get involved in their development. In effect, selection of the projects in the first policy did not target prioritisation of projects specifically meant to improve services in marginalised areas. The criteria used, notably: completion of stalled/ongoing projects; projects whose benefits accrue in more than one constituency; projects contained in the county integrated development plan (CIDP); projects that were fiscally viable; projects that were meant to address extreme poverty; and projects that promote growth and job creation within the county. Though extreme poverty was considered in the criteria, poverty measures do not necessarily reveal whether a community has necessary access to water, roads, health facilities, and electricity. Also, the policy makers did not target communities considered marginalised by any social economic assessment.

v. Utilisation of Funds

47. The demand for public services in marginalised areas is very high. However, there has been a slow uptake of funds allocated to the various counties under the first policy. A total of Kshs. 482 million had been spent by June 2017 on projects across the following nine counties: Garissa, Kilifi, Kwale, Lamu, Mandera, Marsabit, West Pokot, Isiolo and Tana River. Project implementation was yet to commence in Narok, Samburu, Taita Taveta, Wajir and Turkana. A total of Kshs. 11,319 million was yet to be spent on the various projects across the 14 counties.

vi. Identification of Marginalised Areas

48. The first policy identified marginalised areas based on triangulated information from a perception survey report, historical injustices report from three former provinces, and levels of development across the 47 counties. This approach widened the scope of marginalisation beyond the provisions of Article 204(2) which provides for the exclusive use of the Fund to improve services in specific social economic sectors. Thus, the criteria used to identify marginalised areas should link the elements of marginalisation to the public service requirements.

vii. Data Reliability

49. Data employed in developing various indices used to identify marginalised areas pose a challenge. The most recent comprehensive data available is the Housing and Population Census of 2009. Though the KIHBS 2015/16 data is available, it only provides county level measures that could not be mapped into similar measures from the 2009 data due to substantive variations between the two data sets. The Commission recognises the fact that over a period of 9 years, much could have changed across the various areas, especially so, given the various affirmative efforts by both the national and county governments. Nevertheless, given that the changes affect all areas, the use of the 2009 data is still considerably appropriate in identifying areas below the county to ensure proper targeting of the revenue from the Equalisation Fund.

viii. Traditional Lifestyles Among Marginalised Communities

50. A number of marginalised communities happen to fall within the category of hunters and gatherers, nomadic pastoralists and squatters while others live in gazetted and non-gazetted forests. This poses a formidable challenge when developing infrastructural projects for them because of their frequent migration in search of water, food and pasture and the devastating conflicts that ensue. The attendant conflicts require prudent handling in order to avoid any further delay in integrating their social-development needs into the broader national culture. Improving service delivery in communities constantly on the move needs to be carefully thought out.

CHAPTER FOUR

IDENTIFICATION OF MARGINALISED AREAS AND CRITERIA FOR SHARING REVENUE

4.1. Comparative Experiences on Construction of Indices

51. Different countries use different indices and parameters to measure levels of marginalisation. A common measure used by a majority of nations is the multidimensional Poverty Index (MPI). The MPI has been used in Australia, India, Colombia and Bhutan. In these countries, areas identified as marginalised are characterized by economic deprivation, high levels of dependence and social disconnectedness. For example, Bhutan's MPI model uses 13 indicators with varying weights. These are: primary schooling and children out of school (education dimension); child mortality, and food insecurity used as a proxy for nutrition (health dimension); and road more than 30 minutes away, electricity, housing, cooking fuel, drinking water less than 30 minutes away, sanitation, asset ownership of livestock, land ownership of less than one acre, and appliances (living standards dimension).
52. Canada and Mexico use marginalisation indices that are census and geographically based. The indices show differences in marginalisation between areas and facilitate understanding on inequalities in various measures of social well-being, either between population groups or between geographical areas. The indices are constructed based on weighted series of socio-economic indicators of access to such basic services as electricity and drinking water, and indicators of the quality of dwelling conditions and the proportion of the local population that is poorly paid. The index has two dimensions; one pertaining to rights (deprivations) and the other to well-being (incomes). Rights fulfilment is measured by six indicators: educational backwardness, access to health services, access to social security, the quality of housing spaces, basic housing services and access to food.
53. Practically, there is no difference between an MPI and an index of development or deprivation. Both indices bring to the fore the service needs of different sections of a society. In determining marginalised areas, this policy constructs an index of deprivation that is used to rank areas from the least to the most developed.

4.2. A New Framework for the Second Policy

54. In line with the principles of subsidiarity, efficiency and transparency, the second policy changes the unit of analysis from the county to a smaller area within the county (sub-location). This is important in identifying marginalised areas within well to do counties and to ensure proper targeting of resources to improve services. In determining the criteria for sharing of revenue from the Equalisation Fund, the Commission considers both the population of an area and the level of deprivation.

4.3. Identification of Marginalised Areas

55. Marginalised areas are identified using a deprivation index developed using five social economic parameters: namely; primary education, secondary education, water, electricity, and sanitation.

4.3.1 Unit of Analysis

56. The unit of analysis in this policy is a sub-location. Use of a small area to identify a marginalised community- sub location, as opposed to using a county is necessary to improve targeting. This ensures that marginalised areas including those within well-to-do counties are identified.

4.3.2 Choice of Indicators

57. Selection of indicators is guided by the provisions of Article 204(2), comparable international practices and availability of reliable data. Article 204(2) provides that in improving service delivery, the government shall improve services in key sectors including roads, water, health and electricity in areas defined as marginalised. Given that Article 204 is not limiting, indicators in education have been included in the list of those considered in identifying marginalised areas. For lack of credible data on the status of roads below the sub-locations, roads have been excluded from the analysis. A total of five indicators have been considered. These are: access to safe drinking water, use of improved sanitation; use of electricity; net primary school attendance rate and net secondary school attendance rate. These indicators are defined below.

i. Access to Safe Water

58. This is a measure of the proportion of the population accessing safe water. World Health Organization (WHO) categorises sources of water into two: 'safe' and 'unsafe'. Safe sources of water include: piped water, boreholes, protected wells, protected springs and rain water. Unsafe water sources include; unprotected springs, ponds, lakes, dams, jabias (underground water collecting tanks and ponds) and vendor water.
59. The national average for access to safe drinking water is 43 per cent. There are 1,383 areas in Kenya where access to safe water is under ten percent and 609 areas where access to safe water is in excess of 90per cent. The highest number of underserved areas are found in Baringo with 132 areas out of 270; Kitui with 118 out of 316; and West Pokot with 80 out of 198. On the extreme, there are 81 areas in Kenya where a total 115,867 Kenyans live with no access to safe drinking water. The top five worst areas in this category include: Lodwat and Tulabalany in Turkana; Elle Borr and Koya in Marsabit; and Kola in West Pokot. The top three counties with the highest number of areas without access to safe drinking water are: West Pokot with 14, Baringo with 10, Marsabit with 9 and Kilifi with 9. Areas without access to safe drinking water are considered marginalised.

ii. Access to Improved Sanitation

60. This is a measure of the proportion of the population accessing improved sanitation based on sanitation facilities used by households. According to the World Health Organization, WHO, improved sanitation includes use of covered latrines, flush or pour-flush toilets or covered latrines connected to main sewer line, ventilated improved pit latrines (VIPs), septic tanks, cess pools and conservancy tanks or covered cisterns.

61. A total of 1,667 areas in the country had less than 20 per cent of the households accessing improved sanitation with 114 of these areas having less than 1 per cent access against the national average of 53.7 per cent. Majority of these areas are from Turkana 142, West Pokot 130, Baringo 122, Wajir 96, Narok 92, Mandera 88, Samburu 86, Kilifi 81, and Garissa 79. Collectively, a total of 6,153,976 Kenyans have no access to any form of improved sanitation as per the standards of WHO. On the same note 1,098 other areas had over 90 percent of households enjoying improved sanitation in the country. Majority of these areas are found in Meru with 114 and Murang'a with 115 leading the pack of areas with improved sanitation. Sanitation being a basic prerequisite for good public health, areas without access to improved sanitation are considered marginalised.

iii. Access to Electricity

62. This is a measure of the proportion of the population using electricity for lighting and / or cooking. As of 2009, the national average on access to electricity was 8.2 per cent. In the analysis of this indicator, 1,766 areas had households with no electricity connectivity. Residents of these areas rely purely on fossil based fuels and other sources of energy for use. Out of the 47 counties, only 2 counties had full connectivity. These are: Nairobi and Kirinyaga. Arid and semi-arid counties have the least connectivity to electricity. The most affected areas are to be found in West Pokot with 144, Baringo with 132, Kitui with 131, Turkana with 100, Wajir with 83, Narok with 78, Mandera with 73 and Samburu with 73 areas without access to electricity.

63. On the other extreme end, 351 areas had more than 50 per cent of households connected to electricity. Nairobi County leads with 100 areas, Kiambu with 73, Nakuru with 28, Kajiado with 26 and Mombasa with 25. Furthermore, 34 counties had at least one area with more than 50 per cent of households accessing electricity. For purposes of this policy, areas without access to electricity are considered marginalised.

iv. Education

64. Two indicators are used in this policy, namely; primary and secondary school attendance rates.

a) Primary school attendance rate measures the percentage of school attendees out of the total population in the corresponding official school-going age range of 6 to 13 years. The national primary school net attendance rate was 77.7 percent in 2009. However, there were 744 areas where more than 50 per cent of primary school age children were not attending school. Indeed in 10 areas in Marsabit and Turkana, 100 per cent of the primary school age children were not going to school at all. Areas where majority of children are not in school fall in sparsely populated ASAL regions of Turkana with 137, Wajir with 87, Mandera with 74, Garissa with 73, Samburu with 72 and West Pokot with 71 areas. The data further reveals that there were 1,522 areas in Kenya where more than 90 per cent of primary school age children are attending school. These areas are in densely populated counties with good infrastructural facilities such as Kiambu with 136, Nyeri with 173, Murang'a with 187, and Machakos with 125 areas. The national government implemented a national policy of free primary education in 2003. Therefore, areas registering low primary school attendance rates in 2009, seven years after the government implemented a free education programme, are indeed marginalised.

b) Secondary school attendance rate is defined as a measure of secondary school attendees in a given area to the total number of people in the official secondary-school age range of 14 to 17 years. The national secondary school average attendance rate was 21.30 per cent in 2009. There were 1,719 areas where less than 10 per cent of secondary school age children were attending school. Majority of these areas were in West Pokot with 169, Turkana with 143, Kilifi with 127, Narok with 118 and Kitui with 117. On the other end, 374 areas in 22 Counties had more than 50 per cent of secondary school age children attending school. Topping the list are densely populated counties of Kiambu with 104 and Nyeri with 74 areas with high attendance rates. Areas with low secondary school attendance rates are considered marginalised.

4.3.3. Criteria for identifying Marginalised Areas

65. Identification of marginalised areas is based on an index of deprivation calculated based on five indicators using the Principal Component Analysis (PCA). Based on the PCA index, a total of 7,131 areas spread across 47 counties are ranked from the most deprived to the least deprived. The first quintile, comprising of 1,424 most deprived areas are identified as marginalised for the purposes of this policy. The list of the marginalised areas and their locations is presented in Table 4.

4.3.4 Urban slums

66. Based on the criteria used to identify marginalized areas, none of the urban slums ranked in the bottom 20 percent of the sub-locations and therefore were not considered as marginalised. This is because the focus of the policy is on proximity to services and not affordability which is the case in urban slums. Inasmuch as the Commission acknowledges the challenges affecting urban slum dwellers, these challenges require holistic interventions. In this respect, the Commission is working on a technical report on the financing of cities and urban areas. The findings of the report will inform the Commission recommendations on the sharing of revenue between the national and county governments for financial year 2019/2020 and the third basis for sharing revenues among the county governments. Besides, the Commission will work with the national and county governments to articulate holistic strategic interventions to address the plight of urban slums.

4.3.4. Criteria for Identifying Minorities

67. The Constitution in Article 56 provides a legal framework for the recognition and protection of the rights of the minorities and marginalised communities. The Constitution introduces a rights-based approach to development in the context of basic human rights. Further, Chapter Four on the Bill of Rights, provides a framework for affirmative action that ensures that minorities and marginalised communities are brought up to speed in terms of socio-economic and cultural development.

68. A 1977 study by the United Nations defines minorities as:

A group numerically inferior to the rest of the population of a State, in a non-dominant position, whose members being nationals of the State possess ethnic, religious or linguistic characteristics differing from those of the rest of the population and show, if only implicitly, a sense of solidarity, directed towards preserving their culture, traditions, religion or language.

69. The acknowledgement and recognition of minority communities by the state contributes to the preservation of their identities and enables them to obtain equality with other communities. The equality factor may affect participation in political life as well as in the socio-economic development matters.

70. The Commission has been guided by Article 260 in identifying minorities. The Article centres on: small population, unique culture, traditional lifestyle of hunter-gatherer's economy and pastoral communities that have suffered relative geographic isolation which hindered them from integrating into the social and economic life of Kenya. The nine minority communities that satisfied these criteria were:

i. Endorois of Baringo

71. The Endorois are a semi-nomadic pastoralist community found mainly around Lake Bogoria and Mochongoi forest in Baringo County with pockets found in parts of Nakuru and Laikipia Counties. As a result of assimilation with the larger Tugen community, only a handful of Endorois can speak their mother-tongue. This assimilation by the Tugen has led to the Endorois to be erroneously classified as a sub-clan of the larger Tugen community rather than as a distinct separate tribe. Some of the major challenges faced by the Endorois include non-recognition of their land rights in and around Lake Bogoria, limited access to health care, lack of basic infrastructure like roads and low quality education, insecurity, limited livelihood opportunities, and lack of political representation.

ii. Ilchamus of Baringo,

72. The Njemps also known as Ilchamus, are a Maa people living in the South and Southeast of Lake Baringo, in Baringo County. The Ilchamus are the only Maa speaking community that keeps cattle and pursues fishing. Some of the challenges facing the Ilchamus include inadequate water, inadequate food, health, land tenure, low education levels, livestock diseases, and insufficient education of girls, unemployment of the youth, poor roads and communication network, low access to markets for crops and livestock, and wildlife menace. Although the Ilchamus suffer from geographical isolation, they are fairly well represented in both the national and county governments.

iii. Sengwer of Trans Nzoia

73. The Sengwer are a hunter-gatherer community found in Kapolet forest in Trans Nzoia County, Embubut forest in Elgeyo Marakwet County and Talau, Kapenguria division, West Pokot County. Historically, the Sengwer have been identified as "dorobo"- a derogatory Maasai word meaning poor people, as they own no cattle. The Sengwer are also often referred to as the Cherangany as they claim the entire Cherangany as their ancestral land. Some of the challenges faced by the Sengwer in Cherangany include lack of land tenure rights in Kapolet, Embubut and Talau, lack of access to quality health, education and basic infrastructure like roads, hospitals and water. The Sengwer of Trans Nzoia are fairly assimilated with the neighbouring communities and there have been noticeable efforts to provide public services to them.

iv. Waata of Isiolo and Mandera,

74. The Waata, formerly hunter-gatherers, are scattered territorial groups along the Tana and Galana Rivers and in the Taru Desert in Eastern Kenya, on the Kenyan coast and in Isiolo, Mandera and Marsabit counties. They eke out a meagre existence from burning charcoal, supplying building poles, or serving as watchmen in towns. The few who are better off keep some livestock, do farming or trade.

v. Elmolo of Marsabit,

75. The El Molo, also known as Dehes, Fura-Pawa and Ledes, are an ethnic group mainly found in and around Loyangalani in Marsabit county, on the shores of Lake. The Elmolo have little access to education and medical facilities. A school and dispensary that the Elmolo benefit from is provided by the Catholic Church. The Elmolo culture is disappearing with modernity slowly eroding communal values and social fabric. Due to lack of clean water, the El Molo take high fluoride from local waters sources, which causes discolouring of their teeth. Fish is the primary stable food for the El Molo. Thus, the dwindling fish stock in Lake Turkana poses a serious threat to their livelihoods. Food, pasture and water have always been the community's worry.

vi. Boni of Lamu,

76. The Boni community, also referred to as the Aweer, are a hunter-gatherer community found in Boni forest in Lamu and Tana River Counties. Historically, the Boni are semi-nomadic forest dwellers, whose livelihoods have depended on the Boni forests for wood, meat, honey and herbal medicines. Like other marginalised communities, the Boni lack basic infrastructure like roads, health centres, electricity and schools. They also face acute water and food shortages following long dry spells that have caused rivers, boreholes and lakes to dry up.

vii. Makonde of Kwale,

77. The Makonde are an ethnic minority community originally from southeast Tanzania and northern Mozambique about 80 years ago but currently residing in Kwale County. The Makonde have never been recognized as citizens even after several generations were born and raised in Kenya. However, on 31 January 2017, the Makonde were official recognized as a tribe in Kenya. Because of their non-citizens status, the Makonde have no land tenure. Lack of identity have seen the makonde live as squatters in Kwale County facing challenges accessing education and health. The Makonde are famed as master carvers throughout Africa.

viii. Yaaku of Laikipia,

78. The Yaaku, otherwise known as Mukogodo-Maasai, are found in the Mukogodo forest in Laikipia North constituency in Laikipia County. Though originally a hunter-gatherers community of nilo-cushitic origin, they have been assimilated into the pastoralist culture of livestock keeping. There are a few Yaakus who can speak the Yainte language. The Yaaku lack quality health care, education and access to safe drinking water.

ix. Dorobo Seleita of Narok

79. The Dorobo Seleita are also known as the Ogiek. These are a hunter-gatherer community found in the greater Mau forest complex in Narok, Nakuru, Baringo, Kericho, Nandi and Uasin Gishu Counties. They rely mainly on the Mau forest for food and shelter. Their education levels are low with most of the students not progressing beyond primary education.

80. The nine (9) minority communities were further subjected to the provisions of Article 56 which requires the State to put in place affirmative action programmes to ensure that minorities and marginalised groups: participate and are represented in governance and other spheres of life, are provided special opportunities in educational and economic fields, have access to employment opportunities, feel free to develop their cultural values, languages and practices, and have reasonable access to water, health care and infrastructure.

81. The Commission used a qualitative measure to decide which minority community among the nine is deserving of interventions through the Equalisation Fund. The qualitative measure considered the following six variables to categorise minority communities: (i) representation, (ii) land ownership, (iii) discrimination/recognition, (iv) cultural identity, (v) traditional lifestyles and (vi) provision of basic services. Within the provisions of improving services in marginalised areas, the Commission recommends that the Elmolo, Makonde, Waata and Dorobo-Saleita minority communities be targeted and specific projects be earmarked and ring-fenced for them within the marginalised areas where they fall.

4.4. Revenue Sharing from the Equalisation Fund

82. The criteria for sharing revenue from the Equalisation Fund among the 1,424 areas is based on two indices; the log of the population and the exponential of the PCA index used to identify marginalised areas. Table 4 presents the list of marginalised areas and the criteria for sharing revenues among them from the Equalisation Fund. The notes on determining the deprivation index using PCA is presented in Appendix II while the criteria for allocation of the funds in the various marginalised communities is shown in Appendix III.

4.5. Duration of the Second Policy

83. This policy will be used to share revenue from the Equalisation Fund for financial years 2011/12; 2012/13/ 2013/14, 2017/18; 2018/19; 2019/2020 and 2020/21.

4.6 Master Plan on Marginalisation

84. Marginalization is a multifaceted concept that needs a much broader framework beyond the provisions of Article 204 to be effectively addressed. A master plan is required to provide a framework for ridding the Kenyan society off social and economic exclusion. Given the size of the Equalisation Fund, it should be considered as ‘seed money’ to be used to stimulate mobilization of more funds to provide comprehensive services in marginalized areas. Beyond the Fund, the Master Plan should be designed to mobilize resources capable of covering sectors that have not been considered for funding from the Equalization kitty. As presently designed, the Fund remains a catch-up fund.

85. The master plan will provide the baseline on marginalisation and a roadmap on how governments should address marginalisation beyond the period of the Equalisation Fund. Besides, it will provide a framework for tracking improvement in service delivery among the marginalised communities by various stakeholders.

CHAPTER FIVE

POLICY RECOMMENDATIONS

5.1 Implementation Framework

86. Article 204(3)(b) stipulates that the national government may use the Equalisation Fund either directly or indirectly through conditional grants to counties in which marginalised communities exist. Currently, the EFAB disburses funds to finance projects in marginalised counties through the line ministries. The Commission recommends that EFAB establishes projects implementation units (PIUs) at the divisional level and transfers funds directly to PIUs. The total number of PIUs to be established will be approximately 360. PIUs should comprise of selected national government and county government technical staff responsible for water, health, education, roads and electricity. The Assistant County Commissioner (ACC) should chair the PIU and provide the secretariat.
87. The PIUs should be assigned the responsibility to identify and implement projects. They should prepare sector specific project proposals for approval and funding from EFAB. The PIUs should also provide quarterly project implementation reports to EFAB. The EFAB should remain with the overarching role to oversight and advise on the operations of the Fund. The use of PIUs will minimize administration costs of the Fund, allow for integration of the Fund activities into the county planning and implementation frameworks, and create synergies in the implementation of the projects between the two levels of governments.

5.2 Key Priorities for improving services in Marginalised areas

88. The responsibility of identifying projects for implementation rests with EFAB. The Board, should therefore ensure that through a consultative process, unique projects and programmes that can positively impact on the lives of the marginalised communities in priority areas are determined for funding from the Equalisation Fund. During consultative meetings the Commission held with various stakeholders and marginalised communities, three priorities emerged. These are: water, education and health. The Commission encourages the Board to prioritise these three sectors in allocating revenue for projects in the marginalised areas. These priority sectors are discussed below:

i. Water

89. Access to safe water is a basic universal human right. Inadequate water supply is not only bad for health, but also contributes to food insecurity and lagging social development. Water remains one of the major challenges in marginalised areas. Most of these areas experience dry spells for the most part of the year. During dry months, marginalised communities in general and pastoralists in particular are forced to migrate with large herds of livestock to other wetter areas in search of water

and pasture leaving behind established infrastructure for health and education. Consequently, lack of water compromises the health and educational attainments of marginalised communities. Accordingly, if access to clean and safe water could be ensured, the communities would settle, benefit from established infrastructural facilities, especially those related to education and health. This will go along way in minimizing conflict with neighbours and wild animals. In addition, the residents will devote more time to other more productive economic activities.

90. To enhance funding in resolving the perennial water problem across the country, there is merit in pooling resources together. The Kenya Water Sector Trust Fund (WSTF) has access to substantial resources and for project sustainability, the Board needs to involve the WSTF in establishing an effective framework of implementing water projects.

i. Education

91. School enrolment, attendance and transition rates in marginalised areas have been hampered by several factors that include; long distance between schools, dilapidated school infrastructure, inadequate teachers, early marriages, and nomadic pastoralism. In most consultative forums with the communities, it emerged that establishment of boarding schools will, by a considerable margin, improve educational standards in marginalised areas. Boarding facilities will protect the children from walking long distances, reduces their exposure to cultural practices and shields children from attacks by wild animals.

ii. Health

92. Provision of community health services is still low in most of the marginalised areas. Residents walk long distances to access health facilities which in most cases are inadequately supplied with essential drugs and are often understaffed. Further, most of the marginalised areas are sparsely populated and different categories of hospitals are very far apart. It is therefore important to adequately equip all level I Hospitals and make provisions for maternity and ward facilities.

5.3. Other Priorities

93. Marginalised communities also appreciated the fact that access roads, electricity and provision of security are crucial pre-requisites to economic development.
94. Nevertheless, the Commission notes that constructing access roads, provision of electricity and security across the marginalised areas may require huge capital outlays beyond what is available from the Equalisation Fund. The Commission recommends that both the national and county governments should prioritise funding to these key sectors from their equitable shares. However, where there is dire need to link up communities by way of constructing roads, these may be considered for funding.

95. Insecurity is a key concern among the marginalised areas and a hindrance to other development priorities, especially among the boarder counties. Since the provision of security is a national government function, it should be addressed from other funds outside of the Equalisation Fund.
96. The national government policy on last mile connectivity endeavors to provide electricity to all public institutions. This should remain the case even for the marginalised communities.

5.4. Strengthening Public Participation

97. The EFAB should provide a comprehensive framework for engaging the beneficiary communities and implementing agencies. Public participation during project selection and implementation should be enhanced to foster ownership, sustainability of projects and proper use of public resources.

5.6. Prepare operational guidelines

98. The EFAB and the other stakeholders should jointly prepare operational guidelines for the Fund. The guidelines should spell out: project identification, prioritisation, selection and implementation modalities, fund disbursement requirements, monitoring and evaluation frameworks, and oversight modalities, among other things.

Annex I: Number of Marginalised Areas by County

No.	County	Constituency	No. of marginalized areas
1	Baringo	Baringo North	9
		Baringo South	14
		Mogotio	19
		Tiaty	48
2	Bomet	Chepalungu	3
3	Bungoma	Mt Elgon	9
4	Busia	Budalangi	1
		Teso North	2
5	Elgeyo Marakwet	Keiyo South	1
		Marakwet East	9
		Marakwet West	1
6	Garissa	Balambala	20
		Dadaab	12
		Fafi	12
		Garissa Township	2
		Ijara	25
		Lagdera	12
7	Homa Bay	Homa Bay Town	1
		Ndhiwa	11
		Suba North	3
		Suba South	5
8	Isiolo	Isiolo North	15
		Isiolo South	10
9	Kajiado	Kajiado Central	23
		Kajiado South	9
		Kajiado West	32
10	Kericho	Bureti	1
		Kipkelion West	1
		Sigowet/Soin	8
11	Kilifi	Ganze	29
		Kaloleni	15
		Kilifi North	1
		Magarini	26
		Malindi	5
		Rabai	2

No.	County	Constituency	No. of marginalized areas
12	Kisumu	Muhoroni	2
		Nyando	2
13	Kitui	Kitui East	21
		Kitui South	15
		Mwingi Central	9
		Mwingi North	18
14	Kwale	Kinango	22
		Lunga Lunga	10
		Matuga	5
		Msambweni	2
15	Laikipia	Laikipia North	17
		Laikipia West	1
16	Lamu	Lamu East	5
		Lamu West	5
17	Machakos	Masinga	2
18	Mandera	Banissa	11
		Lafey	20
		Mandera East	19
		Mandera North	18
		Mandera South	18
		Mandera West	11

Annex II: Principal Component Analysis

The PCA score is computed as shown in the equation below:

$$PCA\ Score_i = v_{NSE}^2 NSE_{std_i} + v_{NPE}^2 NPE_{std_i} + v_E^2 E_{std_i} + v_W^2 W_{std_i} + v_S^2 S_{std_i}$$

Where $i = Sub\ Location\ 1, 2, 3, \dots, 7131,$

- v is the eigen vector for each parameter in Component 1
- NSE is net secondary school attendance rate,
- NSE_{std_i} is standardized data of secondary education
- NPE is the net primary school attendance rate
- NPE_{std_i} is the standardized data of primary education parameter
- E is proportion of households using electricity for lighting and cooking
- E_{std_i} is the standardized data of Electricity parameter
- W is the propotion of households accessing safe drinking water
- W_{std_i} is the standardized data of water paramter
- S is the proportion of households accessing improved water
- S_{std_i} is the standardized data of Sanitation parameter

Summary eigenvectors from component 1

No	Eigenvector	Component 1 Value
1	v_{NSE}	0.5318
2	v_{NPE}	0.4372
3	v_E	0.4202
4	v_W	0.3492
5	v_S	0.4770

Annex III: Revenue Sharing Criteria

The criteria for sharing revenue from EF is an index computed as shown below:

$$Sharing\ Index_i = \frac{\log(p_i) \times \left(\frac{\exp(-x_i)}{1 + \exp(-x_i)} \right)}{\sum_{i=1}^n \left(\log(p_i) \times \left(\frac{\exp(-x_i)}{1 + \exp(-x_i)} \right) \right)}$$

Where $i=1, 2, 3, \dots, 1424$ and the x_i is the PCA score for the i^{th} sub location and p_i is the population of the i^{th} sub location

COMMISSION ON REVENUE ALLOCATION

14 Riverside Drive, Grosvenor Suite 2nd Floor
P.O. Box 1310 – 00200 Nairobi.
